

For research projects it may be necessary to collate information from the register with that of data from the hospital journals, health surveys, other health registers or other official administrative registers or systems. More information about the aim of the different collations may be found at our website, as the projects are initiated.

Potential registers which data from the Norwegian Arthritis Register may be collated with:

NORBIO (Norwegian Quality Register for Biologic drugs)

Medical Birth Registry

Cause of Death Registry
