DATA REQUEST FOR ANALYSIS, THE RHINESSA STUDY

Name of researcher responsible for the analysis:

Institution:

Name of centre PI supervising the analysis and use of data:

Aim of analysis:

Expected date by which analysis will be complete:

Variables to be included in the requested data set (please list ALL variables needed, both main variables of interest and all confounders and adjustment factors)

Variables to be included

Researchers are obliged to store data in accordance with security regulations of the relevant University / Hospital. All data delivered will be de-identified (i.e. without social security numbers, names or other directly identifiable characteristics). After final publication, the database may be stored for two years in order to do sub-analyses or checks as requested by journal editors or readers. After this two year period, the database must be erased from all computers, with the exception that the centre PI is responsible to store final datasets and do-files for publications first-authored in that centre. Derived and generated variables must be given back to the datamanager; for some of these, acknowledgement at later use will be justified. The data must not be spread and must not be used for analyses of any other research questions than those in this application.
